

LATAM go-to-market: a *revenue* case for Netspeak

Opening Brazil and Mexico with named enterprise access and two established distribution partners, at no headcount cost and no channel-support burden.

Prepared for Sam Kennedy, GTM

From Paulo Ovídio, São Paulo

Date 7 August 2026

THE PROPOSITION

Netspeak's Latin America conversations have stalled for one reason: there is no one in the region to carry them. I am proposing to be that person, under the Netspeak brand, with every transaction routed through a local partner so Netspeak carries no channel support burden and no currency or collections exposure.

No salary. No headcount line. No engineering prerequisite. Compensation deferred until revenue is collected.

Year-one cash exposure to Netspeak: **approximately US\$18,000** in travel and expenses. Nothing else.

01 / THE PROBLEM THIS SOLVES

A coverage gap, not a demand gap

Demand in the region is already reaching you. It has nowhere to land.

On our call you named three constraints with precision. Your first priority is a fast path to revenue. You cannot switch on many channels because you have no channel managers to support them. And you have had a handful of Mexico and Brazil approaches that went nowhere, in your words, because they were premature and nobody brought you anything.

Lotus ICT came to you. Globo is in conversation. Petrobras is in conversation. Every one of those threads needs someone in-region, in-language, who can qualify it, demo it, and close it without consuming your engineering team. That role normally costs a salary, a quota, and a year of ramp. This proposal removes almost all of that cost.

WHY THIS IS WORTH READING PAST PAGE ONE

The question in front of you is not whether Latin America is worth entering. It is whether it can be entered without spending money you have not raised yet, and without taking Spencer's time away from North America. That is the question this document answers.

Why this is a now decision, not a next-year decision

Your own read is that the incumbents cannot follow quickly, because they are bolting AI onto platforms carrying years of technical debt while Lena was agentic from the first line. That advantage is real and it is temporary. Latin America is the one large region where none of them has moved yet and where, in your words, nothing is staked out.

There is also a calendar. The proactive troubleshooting agent reaches availability in October, and the seed round is in front of you. A region already opened, with named partners and a first reference customer, is a materially better story to raise on than a region described as a future opportunity. Starting now costs one quarter of travel. Starting after the raise means starting from zero with a number already committed to investors.

02 / THE REGION

Named access, not a market study

These are accounts I can personally open, with rooms already installed and already being supported by hand today.

3,000+ ROOMS ACROSS NAMED ACCOUNTS	US\$1.8M ARR AT LIST, IF FULLY CONVERTED	2 DISTRIBUTION PARTNERS, NOT TWENTY	18 yrs SELLING AV/UC IN THIS REGION
--	--	---	---

MARKET	NAMED ACCOUNTS	EST. ROOMS
Brazil	Globo · Petrobras · Vivo · Vale · BTG Pactual · Itaú	2,000+
Mexico	Banorte · Arca Continental / FEMSA · Ternium	1,000+
Total addressable rooms across named access		3,000+

Read this table honestly. These are installed-room estimates for accounts where I have direct relationships or a credible route in. They are access, not pipeline, and I am not forecasting conversion of them. What they establish is that the region is large enough to be worth a very small bet.

TWO OF THESE ARE NOT COLD

During my Polycom years I negotiated and secured contracts worth over US\$10 million with **Petrobras** and **Vale**. Those two names are not entries on a target list I assembled for this document. They are accounts I have already sold into, through the channel, in this region, in this product category.

03 / ROUTE TO MARKET

Two partners, zero channel managers

You said channels would slow you down because they need hand-holding you cannot staff. The answer is not fewer channels. It is the right two, both of which already own the enablement machinery you would otherwise have to build.

Portenntum de México

MEXICO · 33 YEARS · MASTER DISTRIBUTOR

- Sells to a reseller base rather than to end users. One agreement reaches their whole network.
- Carries HP Poly, DTEN, OneScreen and HPE Aruba networking: both layers Lena touches, AV endpoints and switches.
- Runs its own partner program with exclusive pricing, technical training and partner financing.
- National technical support and logistics already in place.

DigitalnetBR

BRAZIL · 15+ YEARS · UC&C INTEGRATOR

- Certified Poly partner, publicly endorsed by Poly's own LATAM pre-sales leadership.
- States 1,500 companies connected and over 100,000 active users.
- Clients include Vale, BRF, Furnas, Raízen, Bunge, Toyota, Honda, Unimed, O Boticário and Duratex.
- Delivers consultancy and managed services, not just hardware resale.

To be exact about status: neither partner has been approached about Netspeek, and I have deliberately not done so without your authorisation. What is described above is public profile and my own route in. Opening both conversations is inside the first thirty days, and everything in the facts above is verifiable before you commit to anything.

THE DETAIL WORTH PAUSING ON

Vale is on both lists. It is a named target account above, it is an existing DigitalnetBR client, and it is an account I personally closed at Polycom. The account, the partner who already serves it, and the person who already sold into it are the same three points. That is what a warm entry actually looks like.

The economics the partner sells to itself

Brazilian integrators bill large enterprise accounts on the order of R\$20,000 per month for room support, staffed with eight to ten technicians doing routine checks and truck rolls. Lena moves that routine tier to automation, so the same contract runs with one or two people working the genuinely hard problems.

The partner keeps the contract, improves its margin, protects itself against a competitor arriving with automation first, and adds recurring software revenue at 20 percent. I do not have to convince a partner of that. I have to show them the room-check demo once.

04 / THE PERSON

One hire's worth of coverage, without the hire

Netspeek would normally need four people to open this region. Each of the functions below is a role I have actually held, in this industry, in this territory.

FUNCTION	EVIDENCE
Pre-sales	Polycom Sales Engineer and Technical Account Manager, 2006 to 2013. Lead technical architect on government and enterprise bids across LATAM, translating requirements into specifications with integrators.

FUNCTION	EVIDENCE
Sales	Contracts above US\$10 million negotiated and secured, including Petrobras and Vale.
Services	Senior Manager, Services and Sales Operations at Polycom LATAM. Built a predictive lifecycle strategy that raised services retention by 20 percent.
Channel	HP LATAM distribution, 2020 to 2024. US\$30M P&L, up to US\$10M in annual marketing funds across TD Synnex, Ingram Micro, ScanSource, Anixter and Nexsys. Over US\$100M in partner-sourced pipeline.
Enablement	Trained partner technical teams across LATAM on UC and video platforms. Scaled a regional team from five to ten.
Language	Portuguese native, English fluent, Spanish fluent. Both target markets, no interpreter, no localized UI required to sell.
The product itself	Post-graduate in AI and machine learning, University of Texas at Austin. DSc in Electrical and Computer Engineering. Currently building and selling production agentic AI systems. I can explain what Lena is doing to a network team, not just demo it.

Half your team is former Polycom. I am from the same bench, I know Spencer's work, and I will not need to be taught this category.

05 / COMMITMENTS

Small, dated and verifiable

I would rather be measured against numbers I can hit than sell you a forecast.

BY DAY 90

Three paid demos or pilots signed

Both partner agreements in motion, with Portenntum and DigitalnetBR engaged, trained on the room-check demo, and each carrying at least one qualified account.

BY DAY 180

20 rooms under paid licence

Collected revenue through a local partner, invoiced to Netspeek in US dollars, with a reference customer willing to be named in-region.

Twenty rooms is US\$12,000 in annual recurring revenue. That number is deliberately small, and it is a commitment rather than a projection. It is not the prize. It is the proof.

Enterprise AV deployments land by floor and expand by campus. One Globo or Vale site growing from 20 rooms to 200 is US\$120,000 ARR from a single logo, and by that point the motion, the paper and the partner are already in place. What the first 180 days buy you is evidence that the region converts, at a cost low enough that being wrong is survivable.

06 / COST

What this actually costs Netspeak

LINE	COMMITMENT	COST
Salary or retainer	None. Compensation deferred until revenue is collected.	US\$0
Headcount line	None. No entry on the org chart, no seat in the seed plan.	US\$0
Channel managers	None. Two partners, both with their own enablement and support functions.	US\$0
Engineering and localization	None required to begin. Lena already answers in Portuguese and Spanish.	US\$0
Solutions engineering time	Bounded. Onboarding and training up front, then I run demos myself.	Limited
Travel and expenses	Two domestic trips per month in Brazil, one trip to Mexico every two months.	≈US\$4–5k / qtr
Total year-one cash exposure		≈US\$18,000

For context, that figure is roughly three percent of a single fully loaded regional sales hire, and it is the entire downside if this produces nothing.

07 / THE ASK

Three things, none of which cost money

1 A Netspeak identity

An email address and a business card. This is the one thing I genuinely cannot work around. Globo already has ten resellers calling on it and will not take a meeting with an eleventh. It will take a meeting with Netspeak. I need to arrive as the company, bringing a partner, not as a partner asking for attention.

2 Product training and a demo tenant

I will cost Spencer time before I save him any, and I would rather price that honestly than wave it away: roughly ten hours across the first six weeks. After that I run the room-check and proactive-troubleshooting demos unaccompanied, in Portuguese and Spanish, on calls he would otherwise have had to take.

3 Channel paper for the two partners

Your published terms, 20 percent for signed channels, applied to Portenntum and DigitalnetBR. No custom program, no exception process, nothing that needs to be invented.

ON COMPENSATION

I am not asking to be paid now, and I am not asking you to solve payroll logistics you have not solved yet. I would ask that we define a commission against collected LATAM revenue and put it in writing when the first deal closes, alongside first refusal on the regional role once the seed round funds headcount. That costs nothing today, and it means neither of us is relying on goodwill to remember what was agreed.

08 / RISKS

What is not solved, stated plainly

You will take this document to people whose job is to find the hole in it. Here are the four I would raise first.

PRODUCT The interface is English only

Lena already responds in Portuguese, which I saw on our call. The console does not. This is a smaller obstacle than it looks: enterprise network and AV administrators in Brazil and Mexico already work in English-language management consoles every day. It is real for a wider mid-market push, and it gets funded by exactly the revenue this plan produces. Customers paying for the product is what pays for the engineers who translate it.

PRODUCT Yealink is not supported

Yealink's installed base in Latin America is significant and this will come up in the first ten conversations. I would rather sequence around it, leading with the accounts and partners where Poly, Cisco, Neat, Crestron and Zoom dominate, and bring you demand evidence to justify the integration rather than asking for it on faith.

COMPLIANCE**SOC 2 is in process, and Brazil adds LGPD**

Itaú and BTG will ask for both before a pilot, so financial services should not be the opening move. Media, energy, industrial and telecom will move first on a lightweight on-premise proxy. That sequencing costs nothing and avoids the longest security review in the region.

EXECUTION**I am unproven inside Netspeak**

You have known me for years, but you have never seen me carry your number. That is precisely why the commitments in section five are small, dated and easy to check, and why the cost of finding out is roughly US\$18,000. If I miss day 90, you have lost one quarter of travel budget and learned something real about the region at a very low price.

You told me your priority is a fast path to revenue, and that anything which pulls your team's attention away from North America has to justify itself. This is built to do exactly that: a region opened with two contracts instead of twenty, an entry cost of one quarter's travel, and a person who has already sold this category to these accounts through these partners.

Give me the email address and the training, and I will bring you the first three.
